You must be running Luma3DS v7.2 or newer:

- Copy RS3DS-Patcher.firm to sd:/luma/payloads/.
- Enable game patching in the Luma3DS settings menu (hold Select on boot).
- Insert your game cartridge (if you have a Japanese 3DS you can purchase a digital copy from the eShop).
- Restart your 3DS while holding Start and choose RS3DS-Patcher from the menu.
  - If you're somehow in GodMode9, you did something wrong.
  - In that case, reboot your 3DS and start over.
- Press A to install the patch.
- Press any button to reboot and run Rocket Slime 3DS.

User guide

Translation notes

This is not the final version - some in-game text may appear to go off of the screen or some items or quests might have some random not English words in them. However the game is fully playable and is very enjoyable to play as-is.

Gameplay Tips

Ninja Slimes:

- Green: Trade for 8 items
- Blue: Beat Sphinx of Flat Desert again
- Red: Complete the Pink Sanguini ship part set

If you want to move faster:

- Try moving with Elasto Blasts, it's a pretty sizable speed increase – especially when it counts in ship battles.
- Don't rotate the items on your head while walking or standing still, there is a large window of being unable to move if you do so. Instead, jump – and while midair – change the order of items on your head. This will retain momentum and switch the order.

How to kill things faster:

- If something is at a far range, hold an item and release it while performing an elasto blast.
- Spikes are overpowered. Hold an enemy and stand in front of a spike to make an inescapable death trap by repeatedly catching and throwing either enemies or players.

How to stop losing all the time:

- Using the midair hover can dodge most attacks.
- Chimera wings will defeat any enemy in a single shot.
- Collect items constantly in levels to upgrade your ship's hull and ammunition. Explosive ammo is especially powerful.

Wireless connection is spotty with other players:

- Disabling luma's in-game patching setting may help with desyncs.
- The game often freezes for unknown reasons while starting multiplayer rooms, just keep trying.
